“ *Ahimsa was an amazingly lovable little kitty, who quickly stole the hearts of everyone he met. Our family was lucky enough to be able to foster him during his short life and will never forget the joy he brought to all of us!*

*Not too long after we started fostering Ahimsa, he was diagnosed with Osteogenesis Imperfecta. This disease is extremely rare, and unfortunately, still has no cure. Little Ahimsa had already suffered numerous broken bones, but his sweet loving nature and constant purrs and kisses gave us hope that he could be kept comfortable despite this horrible disease. So we showered him with love, and attention and spoiled him as much as we could for the time he was with us. Sadly, Ahimsa was laid to rest on Sunday, August 24th. Ahimsa, your light will never die! You were loved by many and can now be free to run and play like a kitten should! Be free little one and we will meet again at the rainbow bridge. xoxo*
