“ *The true definition of a working service dog. Nala under went 20k hours of epilepsy and cortisol training. Nala detected seizure activities and PTSD/ Anxiety cortisol detection until her retirement in 2021, when she began to enter her stages of her own medical needs. Still until her final day, she stayed by her handlers side. The love and companion of having a service dog cannot be described in words. There is a huge empty void in our home.*
